

概率统计试 A 卷解析

一. 是非题

是 是 非 非 非 是 非 .

二. 选择题

D A D C B .

三. 填空题

1. $7/8$; 2. $F_Y(y) = \begin{cases} 0, & z < 0 \\ 2z - z^2, & 0 \leq z < 1 \\ 1, & z \geq 1 \end{cases}$
3. 4.2 ; 4. 0 与 0.25 之间 ; 5. $n, 2$.

四. 计算题

1. 解: 设 $A_i = \{\text{第 } i \text{ 次取得新球}\}$, $i=1,2$.

(1) 设 $C = \{\text{第二次才取得新球}\}$, 有 $C = \bar{A}_1 A_2$

$$P(C) = P(\bar{A}_1 A_2) = P(\bar{A}_1)P(A_2 | \bar{A}_1) = \frac{4}{10} \times \frac{6}{9} = \frac{4}{15}, \quad [7/30];$$

(2) 设事件 $D = \{\text{发现其中之一是新球}\}$, $E = \{\text{其中之一是新球, 另一个也是新球}\}$

$$P(ED) = P(A_1 A_2) = P(A_1)P(A_2 | A_1) = \frac{6}{10} \times \frac{5}{9} = \frac{1}{3}$$

$$\begin{aligned} P(D) &= P(A_1 A_2) + P(A_1 \bar{A}_2) + P(\bar{A}_1 A_2) \\ &= \frac{1}{3} + P(A_1)P(\bar{A}_2 | A_1) + P(\bar{A}_1)P(A_2 | \bar{A}_1) \\ &= \frac{1}{3} + \frac{6}{10} \times \frac{4}{9} + \frac{4}{10} \times \frac{6}{9} = \frac{13}{15} \end{aligned}$$

$$P(E|D) = \frac{P(ED)}{P(D)} = \frac{1/3}{13/15} = \frac{5}{13}.$$

解法二 设事件 $B = \{\text{两个中至少有一个是新球}\}$, $A = \{\text{两个都是新球}\}$, 则 $A \subset B$,

$$\text{所求条件概率} = P(A|B) = \frac{P(AB)}{P(B)} = \frac{P(A)}{P(B)} = \frac{C_6^2 / C_{10}^2}{(C_6^1 C_4^1 + C_6^2) / C_{10}^2} = \frac{1/3}{8/15 + 1/3} = 5/13.$$

2. 解: 分布律

X	0	1	2	3	4	5
P	6/21	5/21	4/21	3/21	4/21	5/21

$$\left[\begin{pmatrix} 0 & 1 & 2 & 3 & 4 \\ 1/3 & 4/15 & 1/5 & 2/15 & 1/15 \end{pmatrix} \right]$$

期望 $E(X) = 35/21 \approx 1.67,$
 $P\{X \geq 2\} = 10/21 \approx 0.476.$

3. 解 $X \sim f_X(x) = \begin{cases} \frac{1}{a}, & x \in (0, a) \\ 0, & \text{其他} \end{cases}, f_{Y|X}(y|x) = \begin{cases} \frac{1}{a-x}, & y \in (x, a) \\ 0, & \text{其他} \end{cases},$

$$f(x, y) = f_X(x)f_{Y|X}(y|x) = \begin{cases} \frac{1}{a(a-x)}, & 0 < x < a, x < y < a \\ 0, & \text{其他} \end{cases}$$

$$f_Y(y) = \begin{cases} \frac{1}{a} \ln \frac{a}{a-y}, & y \in (0, a) \\ 0, & \text{其他} \end{cases}$$

4. 解 $X \sim B(n, p), E(X) = np, D(X) = np(1-p),$

$$P\left\{\left|\frac{X}{n} - p\right| < 0.1\right\} > 0.95.$$

有中心极限定理

$$P\left\{\left|\frac{X}{n} - p\right| < 0.1\right\} = P\left\{\frac{|X - np|}{\sqrt{np(1-p)}} < \frac{0.1n}{\sqrt{np(1-p)}}\right\}$$

$$\approx 2\Phi\left(\frac{\sqrt{n}}{10\sqrt{p(1-p)}}\right) - 1 > 0.95$$

$$\Rightarrow \Phi\left(\frac{\sqrt{n}}{10\sqrt{p(1-p)}}\right) > 0.975$$

$$\Rightarrow n > 19.6^2 p(1-p)$$

记 $g(p) = p(1-p)$, 令 $g'(p) = 1 - 2p = 0, \quad p = 1/2, \quad g_{\max} = 1/4$

$$19.6^2 p(1-p) \leq 19.6^2 \times \frac{1}{4} = 96.04$$

故 $n > [96.4] + 1 = 97$ 人 .

5. 解: $E(X^2) = \int_{-\infty}^{+\infty} \frac{1}{2\theta} x^2 e^{-\frac{|x|}{\theta}} dx = 2\theta^2,$

$$\text{矩估计量} \quad \hat{\theta} = \sqrt{\frac{1}{2n} \sum_{i=1}^n X_i^2};$$

$$\text{极大似然估计量} \quad \hat{\theta} = \frac{1}{n} \sum_{i=1}^n |X_i|.$$

6. 解: $\bar{x} = 495.3$, $s = 13.74$, $s^2 = 188.788$,

(1) 提出检验假设 $H_0: \mu = 500$; $H_1: \mu \neq 500$

$$\alpha = 0.05, \quad t_{0.025}(5) = 2.5706, \quad W = (-\infty, -2.5706) \cup (2.5706, +\infty)$$

$$|T_0| = \frac{|\bar{x} - 500|}{\frac{s}{\sqrt{n}}} = \frac{|495.3 - 500|}{13.74} \times 2.4495 \approx 0.8379 \in \bar{W}, \quad [0.4098 \in \bar{W}] \text{ 接受 } H_0.$$

(2) 提出检验假设 $H_0: \sigma^2 = 100$; $H_1: \sigma^2 > 100$

$$\alpha = 0.05, \quad \chi_{0.05}^2(5) = 11.071, \quad \text{拒绝域为 } W = (11.071, +\infty),$$

$$\chi_0^2 = \frac{(n-1)s^2}{\sigma_0^2} = \frac{5 \times 188.788}{100} = 9.439 \notin W, \quad \text{接受 } H_0, \text{ 机器工作正常.}$$

五. 证明题 (6分)

$$(AB \cup C) \subset (A \cup C) \Rightarrow P(AB \cup C) \leq P(A \cup C) \Rightarrow$$

$$\Rightarrow P(AB) + P(C) - P(ABC) \leq P(A) + P(C) - P(AC)$$

$$\Rightarrow P(A)P(B) + P(C) \leq P(A) + P(C) - P(A)P(C)$$

$$\text{即} \quad \rho^2 + \rho \leq 2\rho - \rho^2 \Rightarrow \rho - 2\rho^2 \geq 0$$

解此不等式得 $\rho \in [0, 1/2]$, 所以 ρ 可取的最大值为 $1/2$.
